

Blockchain Technology-Based Industry Solutions.

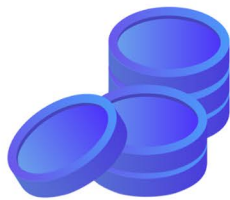

The concept of blockchain technology is already past its introductory phase. Following the massive growth of cryptocurrency and the disruption it brought to the fintech sector, a growing number of industries and business owners are spotting the value, utility, and benefits that blockchain technology can bring to their business.

While some business owners feel adventurous enough to try everything blockchain – from cryptocurrencies to blockchain-based solutions for enterprises – most are more looking for software powerhouses that aren't new to this space. They want guidance into what can sometimes feel like the wild wild west and assurance that their partner in this adventure is an expert in both enterprise-applications and creating disruptive blockchain solutions.

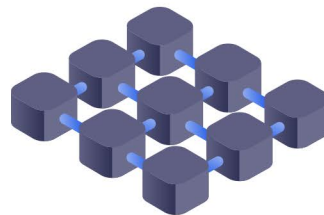

Along with cryptocurrencies, Volo's enterprise-grade experience in blockchain also includes other realms of the financial industry – real estate, compliance, and trading, where we architect ultra-safe and secure solutions for our clients. In building blockchain applications that really work, our team is led by massively experienced architects, who built their careers innovating for some of the leading financial service companies on the planet.

Our focus with blockchain includes:

Cryptocurrencies

From Token generation to developing technologies to build ICOs to crypto-trading platforms and crypto-wallets, we know how to build best-of-breed systems.

Blockchain Technologies for Enterprise

From banking to the Internet of Things, we are constantly exploring ways to transform technology and increase the security, efficiency, and transparency of the solutions we create for our clients.
