

Custom Software Solutions for the Insurance Industry

Helping companies in the insurance industry simplify and streamline their daily operations with software that delivers better customer experiences and improves your bottom line.

Bespoke Software Development **for Your Business**

Why do you need customized software for your insurance business?

Because no two companies are the same, even if they are in the same industry. Bespoke solutions come with the modules and functionality that are catered to the uniqueness of your business and your business operations. Not only will you have a fully owned system with the

flexibility to add all the relevant features and plug-ins as your businesses grows and evolves, you will be able to eliminate ongoing maintenance and subscription costs of off-the-shelf one-size-fits-all solutions already available on the market.

Minimal Time-to-Market

Partner with us to experience true operational agility in software delivery.

Full Integration

Have all your needed modules interconnected and in one place.

Infinitely Scalable Architecture

Rest assured that we design our software architectures with your future in mind.

Excellent User Experience

Expect a low learning curve with our intuitive UI/UX and optimized speed.

Our Insurance Software Solutions

Insurance companies are essentially in the business of risks. In order to perform at the highest level, they need software solutions that optimize the risk management of their own internal operations in terms of complying with regulatory requirements, enhancing operational efficiency, and helping their clients make optimal decisions.

As a seasoned software development company for this industry, we have the required experience and expertise in this domain to deliver solutions to our partners that cover their specific pain points.

Filing and Project Management

Challenge

Insurance specialists need a flexible application to track and manage their filings and projects statuses in real time.

Solution

We created a project management system for a client that comes with flexible real time reporting and dashboard generation functionalities to enable quick and easy insight into ongoing activities.

Regulations Management

Challenge

The insurance industry continues to evolve as a result of globalization and digitalization, and insurance companies have to comply with a slew of various rules and regulations.

Solution

We've solve this problem for our clients by creating an application that allows insurance specialists to store and access all regulation normative acts in one centralized place and track the adoption statuses.

Integration with External Regulatory Systems

Challenge

Using multiple platforms to gather information from different sources can be a headache for insurance specialists.

Solution

We integrate our clients' applications with state databases (e.g. NAIC) to allow users to have access to all of the needed information in a centralized platform, enabling them to pull data and use it in a single repository.

Activity Management

Challenge

With the sheer volume of information being processed on the daily basis by insurance companies, it has become necessary to minimize the risk of human error and achieve optimal resource efficiency.

Solution

We automate activities management and documentation flow, thereby minimizing human intervention in data entry.

Actuarial Solutions

Challenge

It has gotten increasingly complicated to use traditional analytics tools to conduct in-depth analysis and predictions.

Solution

We have experience developing actuarial solutions that transfer reserving and ratemaking calculations to automated, highly accurate, and precise technologies. The goal is to enable actuaries shift away from traditional manual calculations, a practice that is still common in many companies in the industry.

Dashboards and Reports

Challenge

Sometimes, even having comprehensive data in front of you still isn't enough to draw actionable insight.

Solution

We have designed flexible, user-friendly dashboards for our clients to help them easily generate regular custom reports that accurately reflect the state of their business in real time. Users can track relevant information with visualized metrics and tailored reports. The dashboards and reports are extractable in different file formats, such as PDF, Excel, CSV, etc.

Searching System

Challenge

With the big data stored in insurance systems, it is essential to be able to find and retrieve the appropriate information and documents as quickly and accurately as possible.

Solution

Our expertise includes developing searching systems that make it effortless for the users to locate the necessary documents when they need them.

Customizable Notifications

Challenge

With the vast amount of information flowing in daily, it has become a real challenge to keep track of all changes.

Solution

We enable our clients by developing customizable notification systems that allow users to easily follow up on scheduled daily, weekly, and monthly status updates.

As digital transformation continues to permeate all industries, insurtech has become a top priority on the agenda of C-level management, and we're happy to assist our partners in the adoption of new technologies with the aim of gaining a competitive edge.

Why Volo?

We have been providing bespoke insurance software development services for industry innovators since 2017, and our capabilities aren't limited to the aforementioned solutions. If you need a particular solution not described here, just let us know.

**14+ years of
innovation**

**Clearly set up
processes**

**Long-term
partnerships**

**Global mindset and
diverse expertise**
